

Tactical Compressed Gauze®

NSN 6510-43-001-5350
REF: TCG-1

Tactical Compressed Gauze is characterized by high absorbency and is intended mainly for packing heavily bleeding wounds, e.g. gunshot wounds, and for dressing other wounds instead of traditional gauze.

Tactical Compressed Gauze is a vacuum compressed, sterile, 100% cotton, white, highly absorbent filling gauze in a compact, waterproof and easy to open packaging.

After taking it out of the vacuum package, the gauze increases its volume many times, which greatly facilitates the wound packing.

Package: the package is a rugged and durable vacuum sealed container with easy-to-open tear notches. It also takes up less space in first aid kits than traditionally packaged gauze.

Gauze dimensions: 12 cm x 3,75 m

Approximate dimensions of compressed gauze:
53 mm x 77 mm x 13 mm (a little larger than a matchbox)

Foil packaging dimensions (approximate):
104 mm x 141 mm

Usage: it is used to fill the wound and stop the bleeding by applying pressure.
Tactical Compressed Gauze is a class IIa medical device.
